GENERAL INPORMATION:

APPLICANT: Sacindeva, et al.

TITLE OF INVENTION: COMPUTATIONAL METHOD FOR IDENTIFYING ADHESIN-LIKE

TITLE OF INVENTION: PROTEINS OF THERAPEUTIC POTENTIAL

FILE REFERENCE: 30653/40359A

CURRENT APPLICATION NUMBER: US/11/052,554A

CURRENT APPLICATION NUMBER: US/05-007

PRIOR PILING DATE: 2004-07-20

PRIOR PELING DATE: 2004-02-06

NUMBER OF SEQ ID NOS: 763

SOOTWARE: Patentin version 3.3

SEQ ID NO 181

LENGTH: 182

TYPE: PRT

ORGANISM: Shigella flexneri 2a str. 2457T

Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.

Claim 11; Page 10; 49pp; English.

The present sequence is that of a peptide comprising amino acid residues 16-35 of the glucan binding protein-B (GbpB) of Streptococcus mutans strain SK32 ADD93649. The peptide binds to a major histocompatibility complex (MHC) class II protein. It was identified as a potential B cell epitope using a matrix-based algorithm for epitope prediction, which was used to search the primary amino acid sequence of GbpB for known MHC class II binding motifs. The peptide can be used in immunogenic compositions and subunit vaccines for dental caries. These comprise MHC class II protein-binding GbpB peptides covalently linked with peptide subunits (preferably from the catalytic domain) of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multiepitopic polypeptides can be

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an autibody for immunizing mammala against dental caries. This sequence corresponds to a Streptococcus mutans GbpB-derived peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New composition comprising a fragment of a glucan binding protein-B (dpbB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                Gaps
prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in passive immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

caries. The compositions comprise major histocompatibility complex (MHC) class II protein-binding GDpB peptides, especially HLA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GDpB can be used in

                                                                                                                                                 The present sequence is the protein sequence of the glucan binding protein—B (GDpB) of Streptococcus mutans strain SK32. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental carles. The compositions comprise major histocompatibility complex (WHC) class II protein-binding GbpB peptides, especially HLA-binding peptides, cowpositions are used in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant bNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in
                                                  Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Glucan binding protein-B; GbpB; vaccine; anticaries; epitope; immunogen.

protein-B (GDPB) of Streptococcus mutans strain 55M3. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental caries. The compositions comprise major histocompatibility complex (MHC) class II protein-binding GDPB peptides, especially HLA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GDpB can be used in Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein. The present sequence is the protein sequence of the glucan binding Length 431; Score 92; DB 7; Pred. No. 1e-06; 5; Page 8-9; 49pp; English. 100.0%; immunisation. WPI; 2003-845091/78. ```
The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            immunogenicity; immune stimulation; glucan binding protein-B;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

The present invention relates to a computational method (M1) for identifying adhesin and adhesin-like proteins, by computing the sequence-based attributes of protein sequences using five attribute modules of a contraining an artificial network (MNN) for each of the computed five attributes, and identifying the adhesin and adhesin-like proteins an artificial network (Pad) as capes of a diesin-like proteins probability of being an adhesin and adhesin-like proteins, having 274 fully defined 162 encoding adhesin and adhesin-like proteins, having 274 fully defined 162 genes encoding adhesin and adhesin-like proteins, having 105 hypothetical defined 306-18976 base pairs (SEQ ID NO: 385-658) sequences; a set of 105 hypothetical defined 306-18976 base pairs (SEQ ID NO: 12-79); a set of 279 annotated adhesin and adhesin-like proteins, having 105 fully defined 106-5291 base pair (SEQ ID NO: 12-79); a set of 105 hypothetical adhesin-like proteins, having 105 fully defined 106-5291 base pair (SEQ ID NO: 280-384) sequences; and a fully connected multilayer feed forward ANN (1) based on (M1). (M1) is useful for identifying and shesin and adhesin-like proteins for further testing in development of new vaccine forwulations conteins for therapeutic potential. And identifying and short-listing cueful for identifying putative adhesins that are important in discovery and preventing therapeuties for whooping cough, pneumonia, cueful for identifying putative adhesins that are important in discomminations culcar and uninary tract infections. (M1) is capable of predicting adhesin pathogen adhesin culcar and uninary tract infections. (M1) is capable of predicting adhesin and entered for manual pathogenetic spectrum. (M1) is capable of predicting adhesive nature of the proteins. The present sequence is a microbial pathogen adhesin
    Computational method for identifying adhesin and adhesin like molecules, comprises computing sequence-based attributes of protein sequences using neural network software and training an artificial neural network.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Glucan binding protein-B; GbpB; vaccine; anticaries; epitope; immunogen.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.

The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibilty complex (MRIC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention. The invention useful in developmental biology and in elucidating call signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gapie

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57377-ABR3072072). The sequence data for this patent did not form part of printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure; SEQ ID NO 41619; 21pp + Sequence Listing; English.

(5) FixC protein - Bscherichia coli (strain K-12)

N; Contains: probable quinone reductase (EC 1.6.5.-)

C; Species: Bscherichia coli

C; Date: 12-Sep-1997 #sequence_revision 17-Sep-1997 #text_change 09-Jul-2004

A; Experimental source: strain O157:H7, substrain RIMD 0509952
C; Genetics:
A; Coperfamily: pectinesterase pemB
A;Residues: 'MIGL',2-66,'S',68-99,'D',101-153,'N',155-176,'Q',178-226,'KS',229-329,'S',3',737-740,'S',742-757,'N',759-776 <RHO>
A;Cross-references: UNIPARC:UP10000170CFF
A;Experimental source: ATCC 8523
C;Genetics:
C;Genetics:
A;Start codon: TTG
C;Punction:
A;Description: catalyzes both the hydrolysis of internal 1,4-alpha-D-glucosidic bonds (a b,8 tarm to non-reducing end (beta-amylase activity)
A;Pathway: glycosidase; hydrolase; polysaccharide degradation
C;Keywords: alycosidase; hydrolase; polysaccharide degradation
C;Keywords: signal sequence #status predicted <MAT>
F;0-1136/Porduct: beta-amylase core homology <AMY>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Probable pectinesterase ybhC [imported] - Escherichia coli (strain 0157:H7, substrain ED C.Species: Escherichia coli (C.Species: I6-Feb-2001 #sequence_revision 16-Feb-2001 #text_change 09-Jul-2004 (C.Species: I6-Feb-2001 #sequence_revision 16-Feb-2001 #text_change 09-Jul-2004 (C.Species: N.T.; Plunkett III, G.; Burland, V.; Mau, B.; Glasner, J.D.; Roke, D.J.; Mayhew iller, L.; Grotbeck, E.J.; Davis, N.W.; Lim, A.; Dimalanta, E.; Potamous1s, K.; Apodaca, A.Title: Genome sequence of enterohemorrhagic Escherichia coli 0157:H7.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ALR protein homolog - fruit fly (Drosophila melanogaster)
N;Alternate names: protein 63B12.3
C;Species: Drosophila melanogaster
C;Date: 13-Aug-1999 #sequence_revision 13-Aug-1999 #text_change 09-Jul-2004
C;Accession: T12687
E;Ferrax, C; Yidal, S; Brun, C; Bucheton, A; Demaille, J.G.
submitted to the EMBL Data Library, January 1998
A;Description: Sequencing the distal X chromosome of Drosophila melanogaster.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaba

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DNA Res. 8:11-22(2001).
-!- FUNCTION: Could be part of an electron transfer system required for anaerobic carnitine reduction (By similarity).
-!- COFACTOR: FAD (Potenial).
-!- SIMILARITY: Belongs to the ETF-QO/fixC family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         "Genome sequence of enterohaemorrhagic Escherichia coli O157:H7.";

"The fixA and fixB genes are necessary for anaerobic carnitine reduction in Bscherichia coli.";
-1. Bacteriol. 184:4044-4047(2002).
-1. FUNCTION: Could be part of an electron transfer system required for anerobic carnitine reduction.
-1. COFACTOR: FAD (Potential).
-1. SIMILARITY: Belongs to the ETF-QO/fixC family.
                                                                                  Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales;
Enterobacteriaceae; Escherichia.

Patent No. 6562958
GENERAL INFORMATION:
APPLICANT: GAIY L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS
TITLE OF INVENTION TOWNERS: US/09/328,352
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
IENGTH: 948

Sequence 29343, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:
APPLICANT: MARC J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS.
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT PILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR PELICATION NUMBER: US 60/094,190

PRIOR PELICATION NUMBER: US 60/094,190

PRIOR PILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NOS: 33142

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 5,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
